Not Another Nerd, LLC: Capabilities Statement

Company overview

Not Another Nerd, LLC (NAN) is a technology partner for growing businesses and regulated organizations: a fractional CTO to set direction, and a senior-led engineering team to build and run what comes next. NAN was founded by Herman Owens, a software engineer with more than 20 years of experience across large enterprises, universities and the federal government. We are based in the Atlanta area, work with clients nationwide, and are remote-first.

Core competencies

- **Fractional CTO and technology advisory:** strategy, architecture, and build-or-buy decisions.
- **Custom software development:** web and cloud applications, built test-first.
- **Modernization:** moving legacy systems to maintainable cloud architectures.
- **Cloud engineering and delivery:** infrastructure as code, automated pipelines and security-minded delivery.
- **Compliance-aware delivery:** documentation and evidence prepared for regulated environments and review.
- **AI adoption:** scoped pilots with clear success measures.
- **Embedded engineering teams:** senior engineers who join your team and work in your tools.

Differentiators

- Senior judgment on every engagement, not handed off after the sales call.
- Decisions explained in plain language, so you can make them.
- Tests and documentation built in, so the client keeps what we build.
- One accountable partner for strategy, software and delivery.
- Early-career engineers developed on real work under senior review.
